Subject: Application of A-Glaze on Fouga Magister with registration F-GLHF

Dear Angus Craig and Arjen Dicke,

Last year our aircraft, Fouga Magister CM-170, has been treated with A-Glaze and now, after just a couple of months, we are happy to provide you with some savings we made.

First of all, after the application of A-Glaze our aircraft is much easier to clean with saves us a lot of labor hours.

Secondly and even more significant is the fact that we are using less fuel than in the past for the same flights. We are not in the business of line-flying and therefore it is not possible to give a percentage of fuel saving during round-trip-flights. However we do experience during low level navigation flights a much higher indicated airspeed with the same power-setting. For example with the recommended range-power-setting according to the Aircraft Operating Manual, the resulting speed would be 210kts. Now with the same power-setting our aircraft flies 225kts, which equals to a saving of more than 7%!

On top of the above mentioned advantages we also can say that the aircraft colors looks much more bright and shiny. So all together we are very pleased with the A-Glaze application and can recommend this product to every aircraft owner.

Kind Regards, Fons Hemmelder
